

## ...Fool...

Simple mathematics is in order, with 7 Billion plus<sup>1</sup> persons living on Earth. 1% of 7 billion souls equates to 70 million whereas 99% of Earth's population would equal 6 billion 930 million souls living on earth within the body of mankind.

A question presents as to public policy: Does public policy apply to the 1% or to the 99% or to all the people?

Abraham Lincoln being a self educated lawyer then to become the 16<sup>th</sup> President of the United States is attributed with the saying:

*“You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time.”*

Another question arises; are some of the people the 1% and all the people in the first context the 99% and in the second context of all the people would such be the 1% plus the 99%. This writer opinion which matters not in the world of the Supreme Deity, all the people equals all the people, regardless of how categorized.

If true that public policy is set by the 1%, one must consider:

*“The integrity of the court would be in despite if the rule of law is not followed, whereas the integrity of the court becomes questionable so one needs to consider whether immunity of any type is applicable.”*

Recorded in history is Abraham Lincoln was assassinated, that is all that this writer knows of fact, what is not known to this writer is whether Abraham Lincoln was at peace with the Supreme Deity nor is it required to be known, for each must timely have made peace with their Supreme Deity, regardless of religion as to one believes. Pre three dot fools have an opportunity; post three dot fools shall not have the opportunity so it is written. Thus choice has to be timely made wisely.

## The Choice is Yours
